ALEG “ALEX” ALMAN

AI Product Builder | Creative Technology | Entertainment AI | Project & Growth

Los Angeles, CA | (929) 939-7474 | almanaleg@gmail.com | Portfolio: al-man.com

SUMMARY

AI-focused product builder and project leader with international experience across technology, media, and U.S. business operations. Built a practical entertainment-AI portfolio for studio use cases: script intelligence, recommendation systems, continuity review, ad creative generation, and production workflow automation. Combines technical AI execution with measurable business growth experience, including helping a small U.S. company grow from approximately $50K/month to $850K/month in revenue.

CORE SKILLS

AI/LLM: RAG pipelines, embeddings, vector search, AI agents, structured outputs, prompt engineering, OpenAI API, Anthropic Claude, LangChain, FAISS, Weaviate

Entertainment AI: script analysis, story intelligence, continuity review, multimodal AI, ad creative generation, streaming personalization, metadata extraction

Engineering: Python, FastAPI, React, TypeScript, APIs, PostgreSQL, Redis, Docker, GitHub, deployment workflows, technical documentation

Business: project management, vendor coordination, client communication, process improvement, revenue-growth operations, cross-functional execution

FEATURED AI PORTFOLIO

ContinuityAI - Vision-LLM continuity review for film/TV shot pairs: props, lighting, wardrobe, environment, screen direction, severity scoring for post/VFX workflows.

Cinematic RAG Studio - Screenplay-aware RAG for script search, summaries, scene-level answers, creative research, licensing review, and content intelligence.

Unified Recommendation Engine - Streaming catalog ranking prototype connecting free and premium content with audience-personalization and upgrade logic.

Streaming Ad Creative Studio - Brief-to-campaign generator producing creative concepts, 6s/15s/30s scripts, storyboard panels, and campaign positioning.

Live Ads Personalization Engine - Context-aware ad slot planning with audience segments, creative rotation, fatigue control, and live-event monetization logic.

Diffusion Character Toolkit - AI character-consistency workflow concept for animation, concept art, previsualization, and reference-based creative development.

Enterprise AI Orchestration - Agent-style internal studio workflow prototype for metadata extraction, localization packaging, creative review, and task routing.

TARGET ROLES & FIT

Best fit: AI product specialist, creative technology specialist, AI tools developer, technical project manager, entertainment technology strategist.

Why interview: combines hands-on AI prototypes, measurable U.S. growth/project leadership, international tech background, and ability to explain AI value clearly to business and creative teams.

SELECTED IMPACT

• Built portfolio assets designed to be reviewed quickly by HR and validated by technical hiring teams.

• Uses practical demos to prove execution ability instead of only listing AI keywords.

• Strong cross-functional profile: AI, product, operations, customer workflows, and growth execution.

• Comfortable working between creative, technical, and business stakeholders in fast-moving environments.

PROFESSIONAL EXPERIENCE

Independent AI Product Builder / Creative Technology Developer

Los Angeles, CA | 2024 - Present

• Built demo-ready entertainment-AI tools aligned with Disney, Netflix, and Paramount priorities across streaming, production, advertising, and creative development.

• Created browser-based prototypes with backend logic, GitHub documentation, and clear presentation for HR, hiring managers, and technical reviewers.

• Translated studio business problems into working AI products: script search, recommendation engines, continuity review, and ad creative automation.

• Positioned each project with clear user value, technical architecture, demo path, and employer-specific relevance.

AI / Technology / Product Development Experience

New York, NY & Los Angeles, CA | 2021 - 2024

• Developed AI-assisted workflows for content analysis, search, summarization, and creative production support.

• Worked with LLMs, RAG architecture, prompt design, structured outputs, and rapid prototype development.

• Combined technical experimentation with product thinking to create usable tools for business and media applications.

• Built practical AI demos quickly, with emphasis on usability, business value, and clear stakeholder communication.

Project Manager / Growth & Operations Lead

United States | 2019 - 2021

• Invited to the United States and worked in a different business field as a project manager during a major company growth period.

• Helped company scale from approximately $50K/month to $850K/month by improving operations, project execution, vendor coordination, customer workflows, and delivery processes.

• Coordinated owners, vendors, staff, and customers to reduce delays, improve execution, and support a more scalable operating structure.

• Strengthened U.S. business communication, deadline management, and hands-on operational problem solving.

Senior ML / Technology Experience - Yandex

Moscow, Russia | 2016 - 2019

• Worked in a large-scale technology environment focused on ranking, search, recommendation logic, experimentation, and data-driven product improvement.

• Gained strong foundation in relevance systems, user behavior optimization, and product-oriented machine learning.

• Applied data-driven thinking to improve user-facing product quality and measurable outcomes.

Software / Technology Experience - EPAM Systems

Minsk, Belarus | 2014 - 2016

• Supported enterprise software projects for international clients in Agile/SCRUM delivery environments.

• Built foundation in software engineering, analytics, automation, and translating business requirements into working technical solutions.

• Collaborated with distributed teams and learned disciplined enterprise delivery standards.

TARGET VALUE FOR STUDIOS

Disney: content intelligence, metadata systems, production workflow automation, creative AI tools.
Netflix: personalization, content discovery, post-production AI, internal studio tooling.
Paramount: Paramount+/Pluto TV personalization, ad-supported streaming, live ad planning, campaign automation.

EDUCATION & LANGUAGES

Computer Science and technology-focused coursework; continued specialization in AI, ML, product prototyping, and entertainment technology.
Languages: English, Russian, Belarusian
